# ENV 797 - Time Series Analysis for Energy and Environment Applications | Spring 2025
## Assignment 1 - Due date 01/16/25

### Yuqi Yang

## Directions

Before making any edits to this file, please rename it such that it includes your first and last name (e.g., "LuanaLima_TSA_A01_Sp25.Rmd")

Once you have this renamed file open in RStudio, the first thing you will do is replace "author:" on line 3 with your name. Then you will start working through the assignment by **creating code and output** that answer each question. Be sure to use this assignment document. Your report should contain the answer to each question and any plots/tables you obtained (when applicable).

When you have completed the assignment, **Knit** the text and code into a single PDF file. Submit this pdf using Sakai.

## Questions

Q1. What are your previous experiences with time series analysis, R, and Git?

> Answer: I have used time series analysis to work for an airline, mainly for analyzing past sales prices and passenger load factor, targeting certain flights and regions, analyzing passenger travel habits, and making future sales strategy decisions to maximize revenue. Have not used R or Git before but understand some of the basics.

Q2. (Only if you choose to use git) Provide a link below to your forked course repository in GitHub. Make sure you have pulled all recent changes from the course repository and that you have updated your course README file as instructed on the recorded video "Getting started with Git and Github".

> Answer:

Q3. For this part we just want to see the path to your R project. No need to do anything. The output will be automatically generated once you knit you file.

> Answer: This is my working directory:

```
getwd()
```

```
## [1] "C:/Users/HUAWEI/Documents/R_projects/TSA/Assignments"
```

Q4. Copy and paste the link to your forked repository on Github. It should looks like this: "https://github.com/lmmlima/TSA_Sp25"

> Answer: This is my working directory: https://github.com/YuqiY7/TSA.git
